

Do YOU Flood Irrigate?

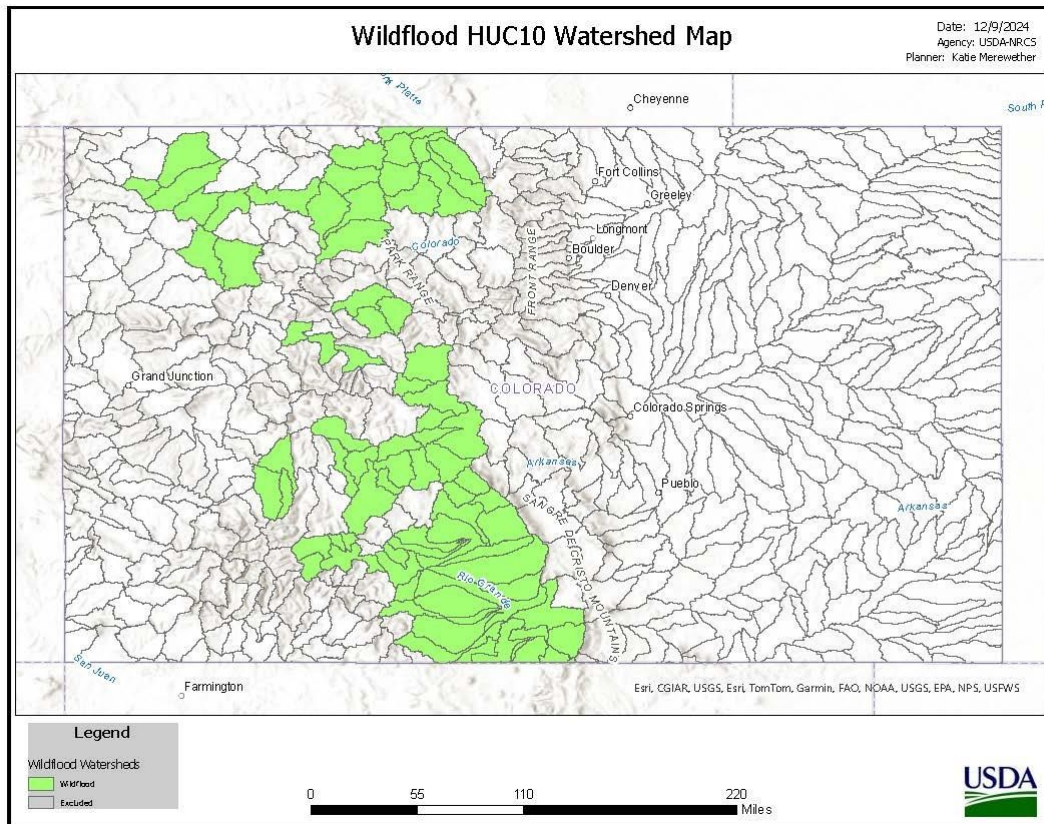

Flood irrigation makes the West green! Your efforts as a flood irrigator help to generate over 58% of the wetlands in the Rocky Mountains and the benefits of this are huge. In addition to the forage production generated to support our food and fiber needs, your efforts support habitat for a host of wildlife and plant species, increased instream flows later into the year and create the scenic landscapes that make Colorado a wonderful place to live and visit.

NRCS Colorado has a specific funding opportunity in place to assist you in keeping your meadows flooded. See the back of this sheet for information on the WILDFLOOD fund pool and how to get more information on keeping Colorado green. Want the science? Click the QR Code below!

Where?

What?

Using NRCS practices, producers in the above watersheds are invited to submit an application to receive funding to support their current flood irrigation efforts through improved infrastructure, efficiency, and monitoring of these efforts. Conservation Practices include: Structure for Water Control (587), Irrigation Ditch Lining (428), Irrigation Field Ditch (388), Irrigation Canal or Lateral (320), Wildlife Monitoring (644), Irrigation Monitoring (646)
